How do I select a group of pictures that contain the same target phoneme?

Let’s say for example, you want to select pictures with the initial /s/ phoneme. First, from the keyword tags menu on the bottom right of the screen, click the triangle next to Singletons to expand the menu.

Next, click the triangle next to Fricatives to expand that category.

Then, click the triangle next to /s/ to expand that category.
Finally, click the box next to *initial /s/* to show all the pictures in the catalog with the initial /s/ phoneme.
